

Energy Auditing Training

NB Power is offering a three-day course on Energy Auditing on June 5-7, 2018 in collaboration with CIET. The course has been developed based on the 30+ years of international experience of CIET's parent company, Econoler, in carrying out energy audits in commercial, industrial and institutional facilities.

Topics Covered

Introduction to energy auditing and energy efficiency

Energy Audit Planning

Initiation and Data Collection

Planning Data collection

Conducting The Site visit

Analysis

Reporting

Energy audit report development

Target Clientele

Specialists supervising and managing facility energy audits and energy management programs, including:

- Energy engineers and consultants
- Current energy auditors seeking certification
- New energy auditors
- Plant and facility engineers
- Energy managers
- ESCO professionals
- Energy performance contracting specialists
- Organizations considering energy projects
- Energy analysis instructors

Objectives

- For participants: to learn how to perform any type of audit, ranging from walk-through audits to investment-grade audits
- For NB Power: to better assure the uniformity and comprehensiveness of energy audits for commercial and industrial clients
